Adequacy of ventilation

Ramesh Agarwal
ra.aiims@gmail.com

Adequacy of ventilation

1. Comfortable baby
2. Normal chest expansion
3. Adequate chest movement
4. Hemodynamically stable
5. Normal blood gases

1. Comfortable
baby...

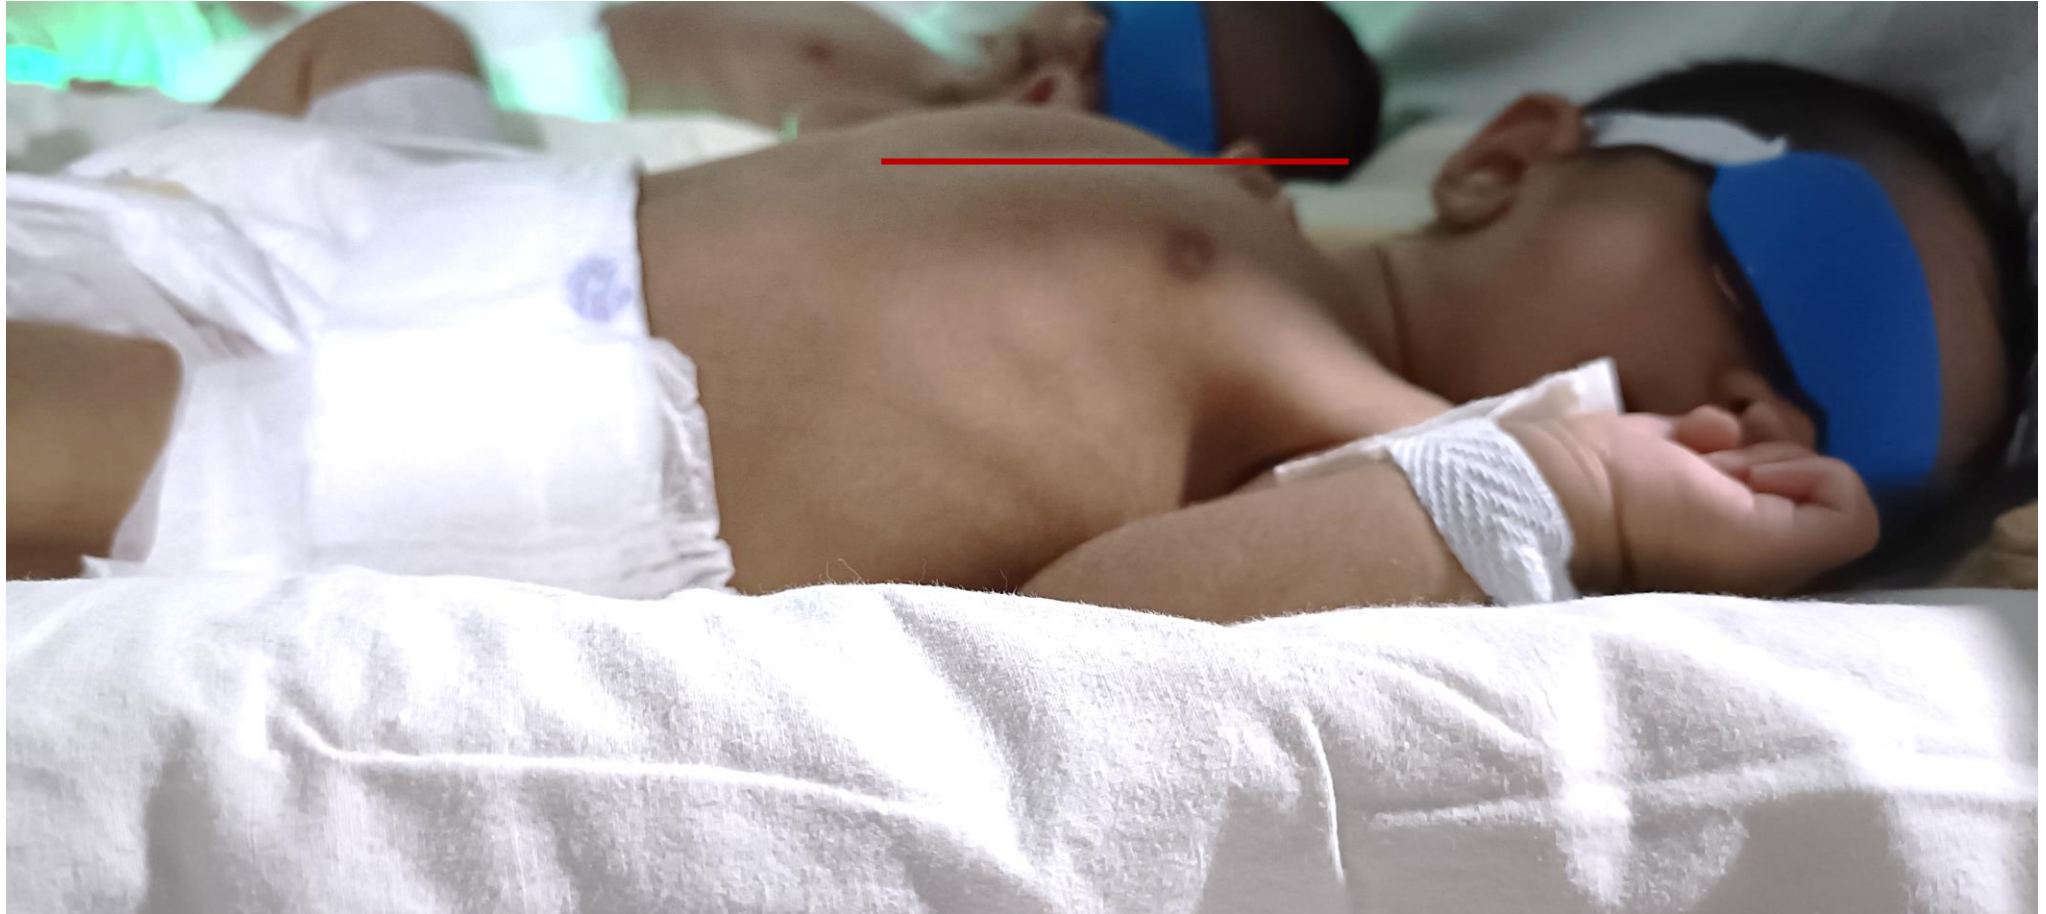

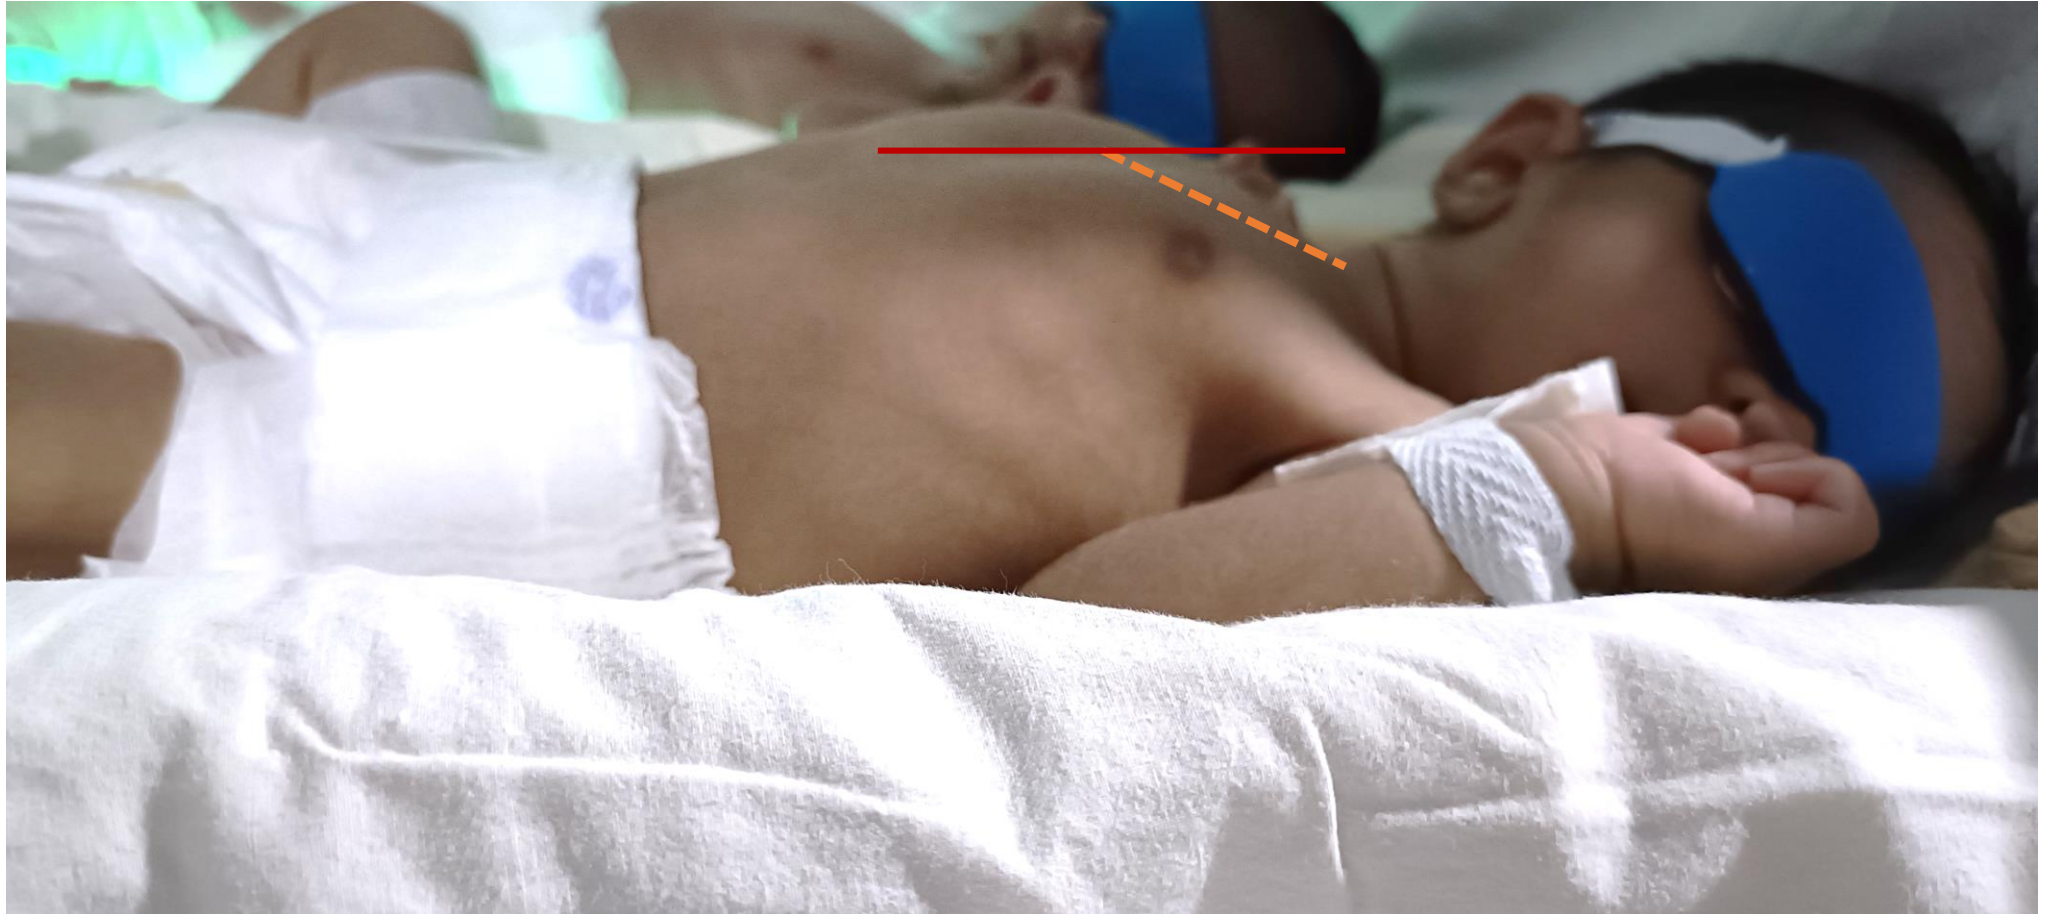

2. Normal chest expansion

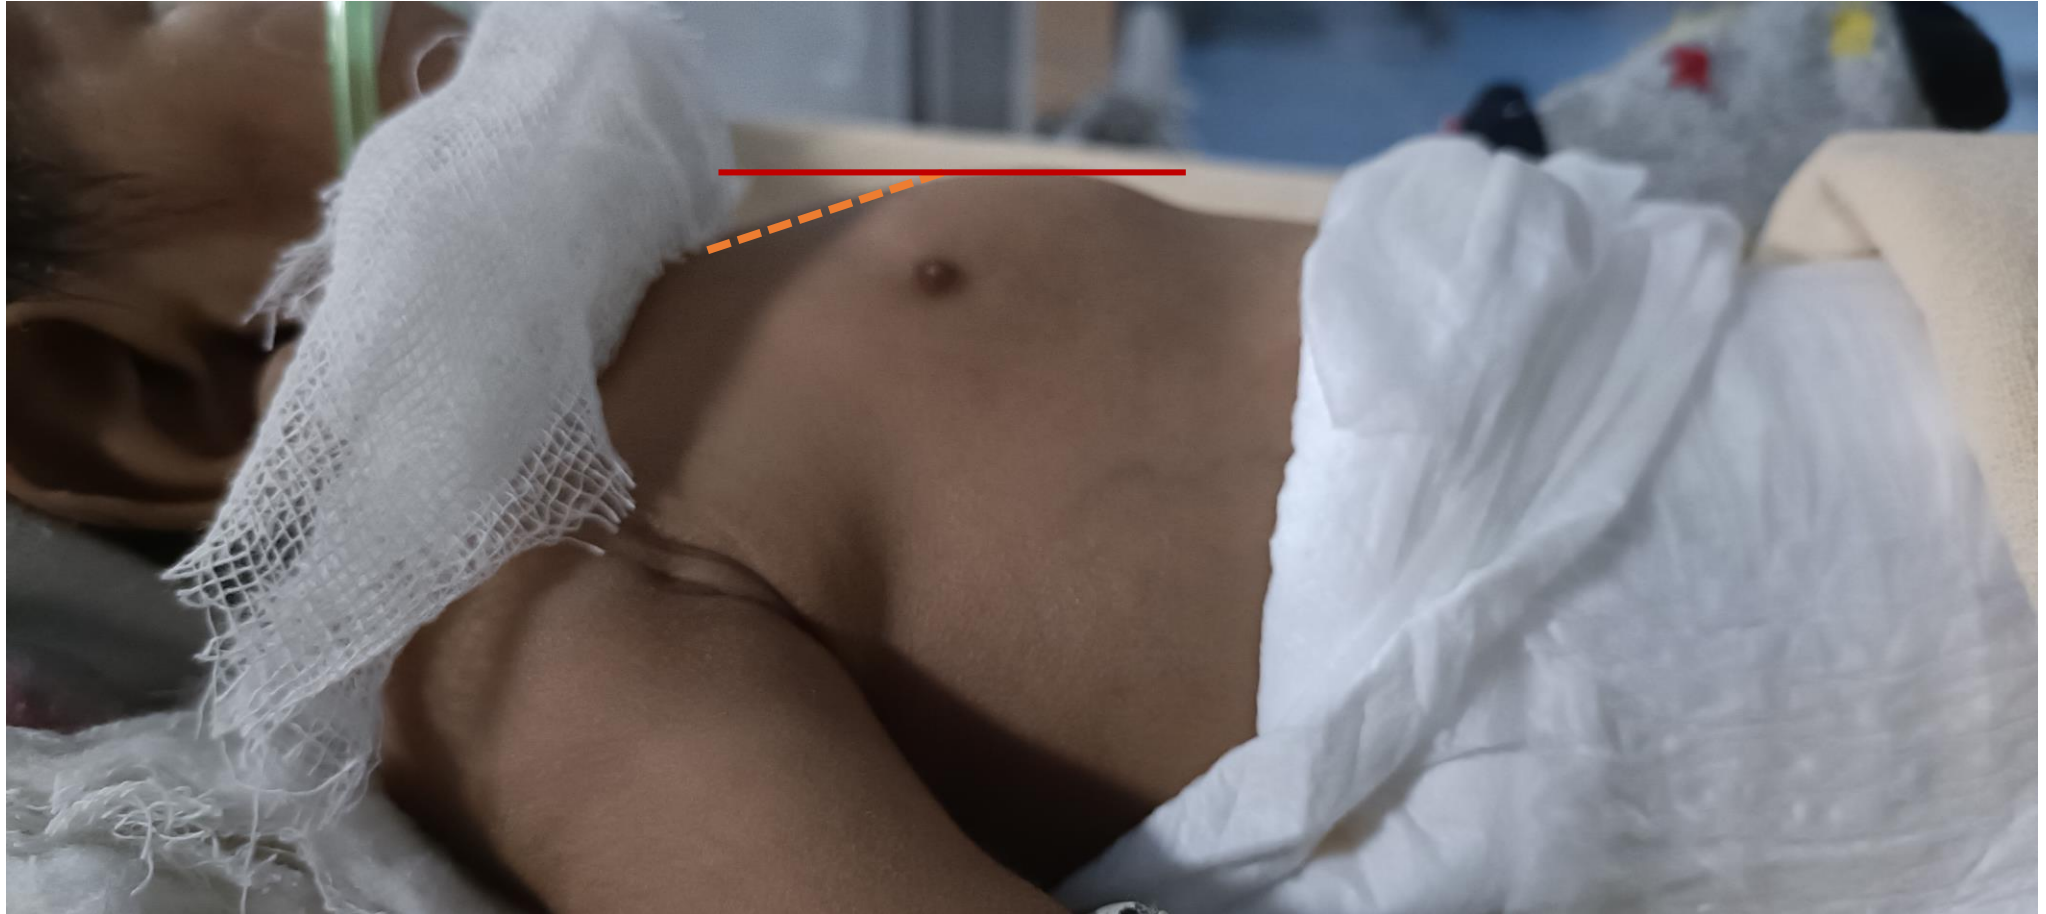

3. Normal chest movement

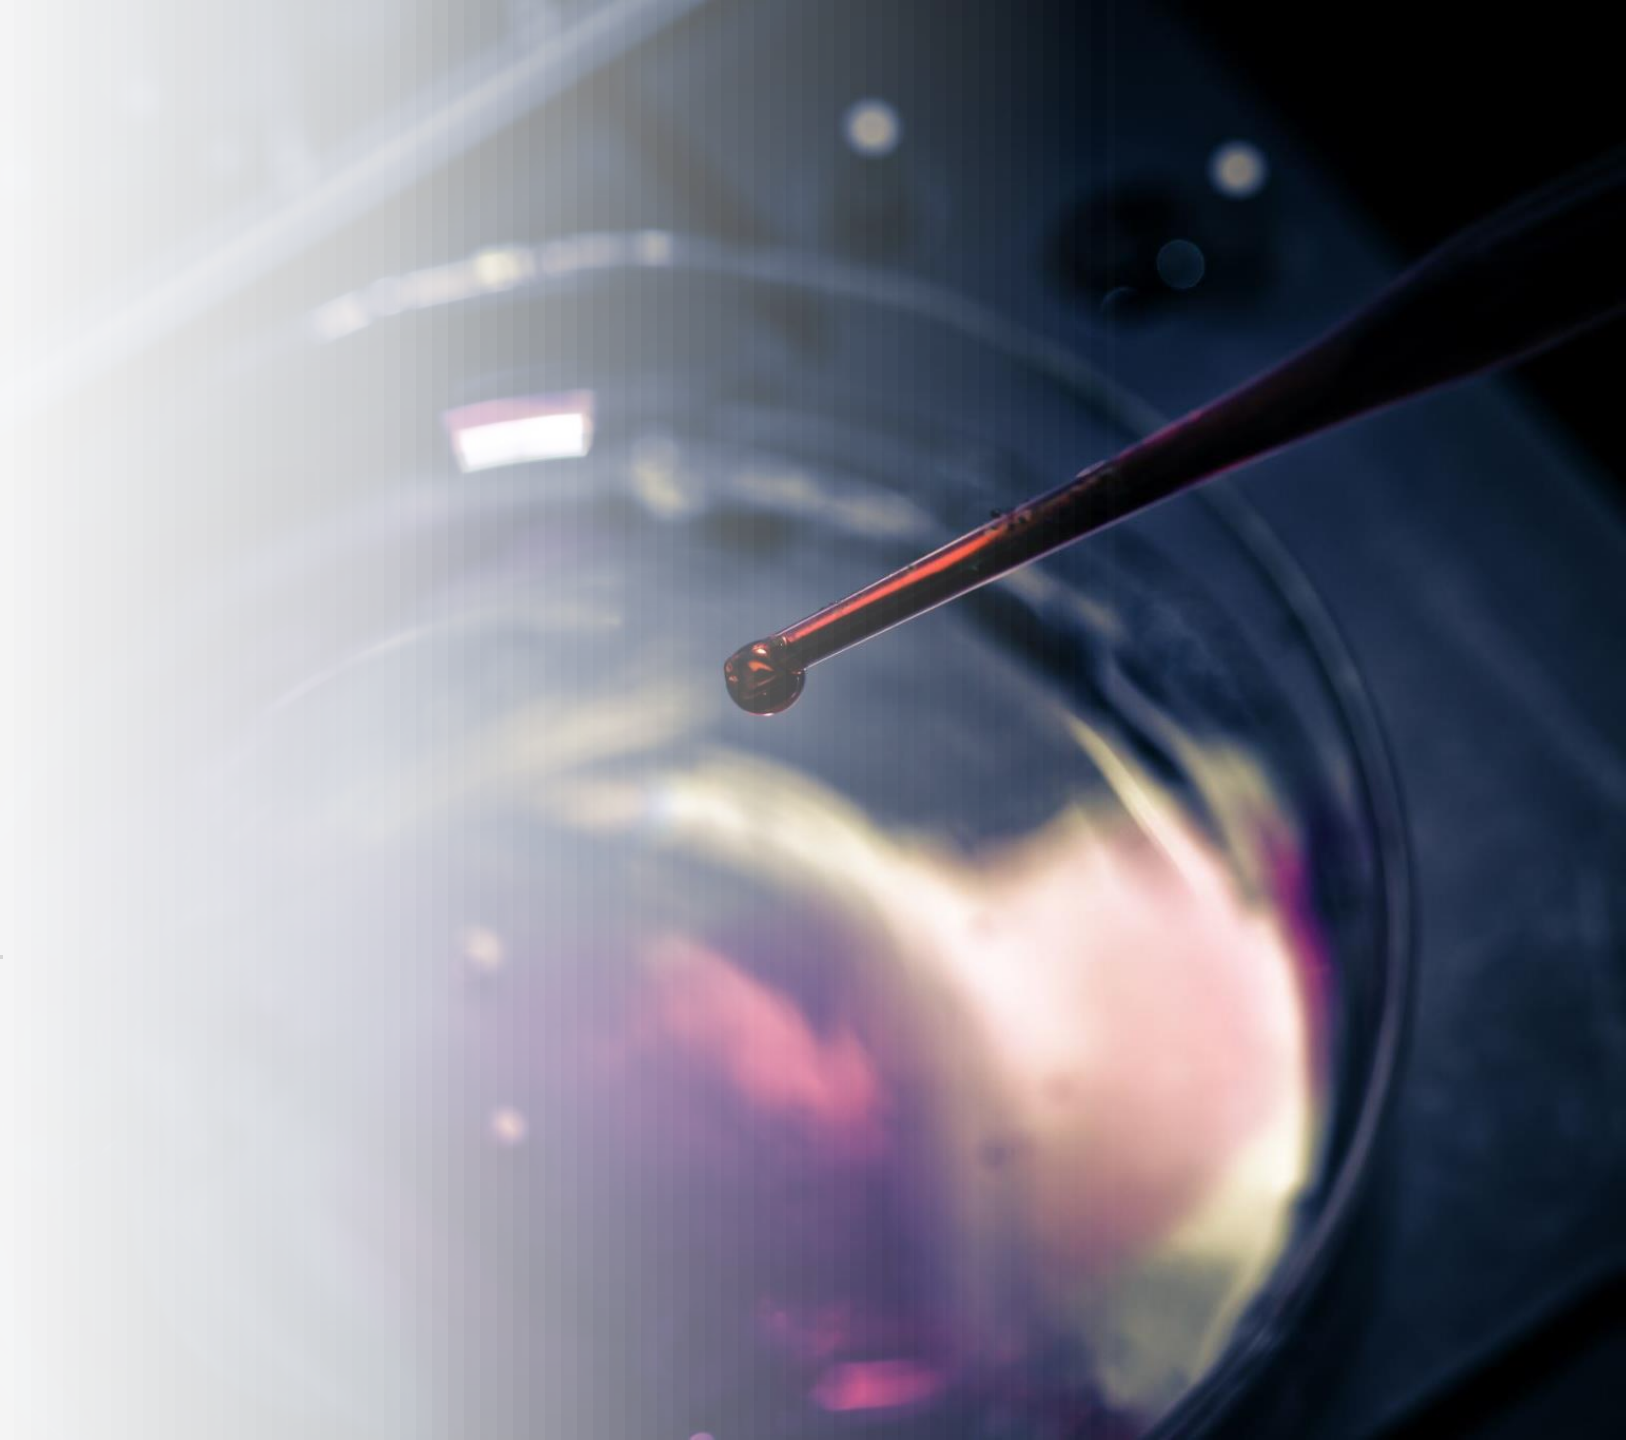

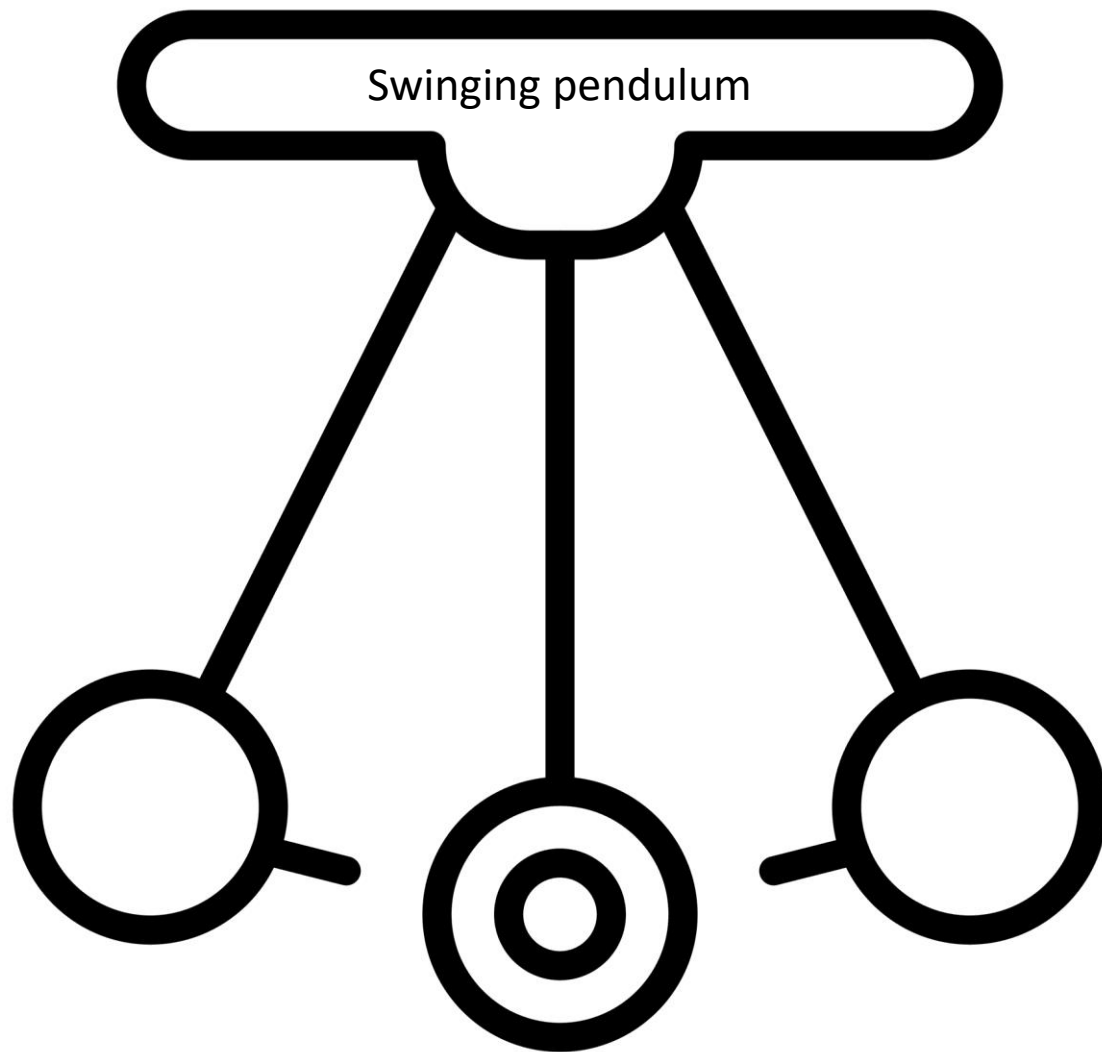

Hemodynamically
stable

Normal blood gases

PEEP-o-phobia;
Too much support

Perhaps too
much PEEP
Too little support
